

Xtreme 12-Station HD Charger

Charge and Desulfate Up to 12 Batteries Simultaneously

- Charges, recovers and maintains one to 12 batteries simultaneously
- Rugged HPX plastic cabinet has wheels for maximum portability
- Fully automatic single switch operation
- Variable charge to 8 A per channel
- Patented pulse technology removes sulfate deposits on battery plates

The SC-12 and all of its connectors fit easily in this rugged portable rolling case.

No need to move the batteries – this rugged, portable charging system lets you charge and condition one to 12 batteries on the pallet, in a shop or wherever they're being stored. Hook up one to 12 batteries, flip the switch and walk away. There are no switches or dials to set and no possibility of overcharging. Completely safe, it makes old style bus bar and gang chargers obsolete.

The 12 independent charging channels profile the condition of each battery and then automatically cycle through a charge/recovery process that applies the correct charge current (variable up to 8 A) and our optimized high frequency pulse to each battery. This patented technology removes sulfate deposits on the battery plates, increasing the battery's ability to accept, retain and release energy, making existing batteries last longer.

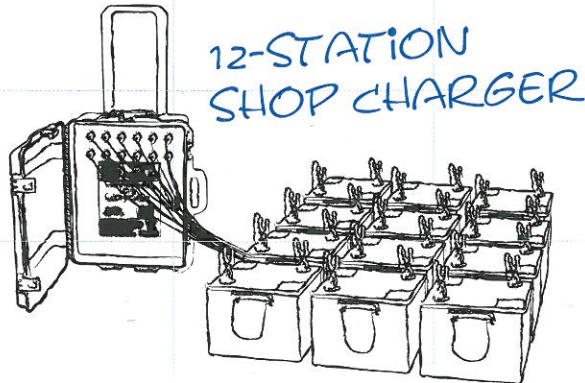

The flexible, replaceable cables fit in the case for easy storage and are easy to disconnect and safely move to the next battery, since no current flows through the cable until connected to the battery.

746X810 SC-12 12-Station HD Charger

740X359 SC-EXT 25' Extension Cable

Specifications

Input Voltage: 110-240 V ac,
15-7.5 A, 50-60 Hz
Output Voltage: 12 V 8.0 A dc per output
Max Charging DC Voltage: 14.8 V dc

Max Charging DC Current: 8.0 A
Dimensions: 24.6" L x 19.7" W x 8.6" H
Weight: 57 lbs.

LED Indicators

Indicators next to each cable connection show status of each battery channel.
